

# LOOP<sup>®</sup>

POST-CONSUMER RECYCLING

Billions of pounds of post-consumer carpet makes its way into America's landfills every year. At Mannington, we have applied a responsible end-of-life plan for the carpet products we manufacture. Through our LOOP<sup>®</sup> reclamation program, we take back post-consumer carpet tile and closed-loop recycle it back into both carpet and hard surface flooring.

# Closing the LOOP

At Mannington, we reclaim carpet tile from any manufacturer and recycle it into Infinity® RE backing and BioSpec® RE heterogeneous sheet. **NO CHARGE. NO MINIMUMS.**

We care about doing what's right for the world in which we live. We've also made it easier for our customers to do what's right by helping them recycle their used carpet tile. With just one phone call, our LOOP reclamation program allows anyone to recycle their used carpet tile.

- No costs are involved
- We reclaim PVC backed carpet tile made by any manufacturer
- No minimum or maximum amount
- Must be a current customer replacing your old carpet with new Mannington flooring
- Non-PVC carpet tile and broadloom to be quoted on a project by project basis

Close the LOOP by recycling your used carpet today! Call us at **800-241-2262 ext. 6211** or email [reclamation@mannington.com](mailto:reclamation@mannington.com) to obtain more detailed information.

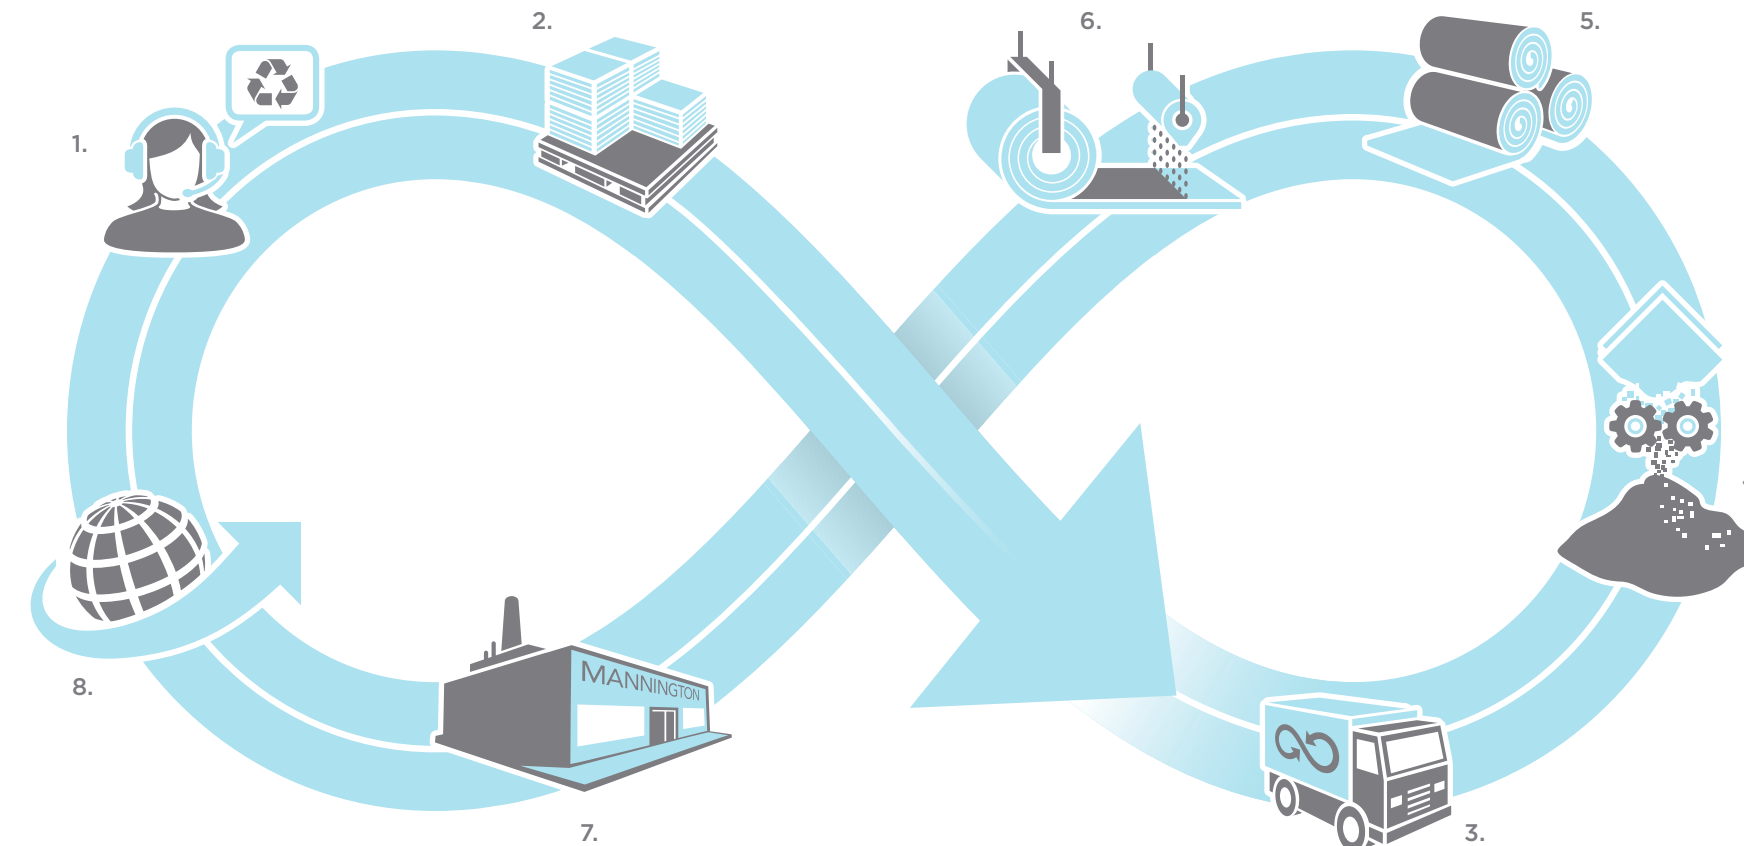

## LOOP contributes to our goal of becoming a “net user of waste.”

**1. Carpet Recycling Requested**  
Mannington customer calls our 800 number or emails us with a request to recycle their carpet tile.

**2. Used Flooring Removed**  
Working with our customer's carpet dealer or installer, the old carpet tile is assessed and if applicable removed, packaged and scheduled for pick up.

**3. Used Flooring Transported**  
The used carpet is picked up and transported to our LOOP recycling center.

**4. Used Flooring Processed**  
The LOOP recycling facility breaks down the used PVC carpet tile into usable pellets, which are shipped to our manufacturing facility.

**5. BioSpec® RE Produced**  
At our manufacturing facility, some of the recycled pellets are used to create our BioSpec® RE resilient sheet flooring.

**6. Infinity® RE Backing Produced**  
In addition, our facility applies the recycled pellets to a fiberglass scrim, turning it into Infinity® RE backing that is then used as backing in our carpet manufacturing facility.

**7. New Carpet Tile Produced**  
Our carpet facility uses the Infinity® RE backing to produce many of our carpet tile products.

**8. The LOOP Continues**  
These new flooring products are then sold worldwide to our customers, helping them create beautiful new spaces, thus closing the LOOP.

Infinity® RE backing contains a minimum of 10% post-consumer and 20% pre-consumer recycled content by total product weight.

BioSpec® RE sheet flooring contains a minimum of 20% post-consumer and 15% pre-consumer recycled content by total product weight.
