---

Recommended Usage Chart – Notes

**Key**

**HR:** Highly Recommended – An excellent floor for the space

**R:** Recommended – Other floors may be better suited

**NR:** Not Recommended – Should not be used in this space

Each of the following classifications: HR (Highly Recommended), R (Recommended), and NR (Not Recommended), are based on durability, cost, and the design criteria of the space, not solely on performance.

**General Notes**

- Mannington Resilient floors are not recommended for commercial kitchens.
- Mannington Resilient floors are not recommended for heavy industrial areas.
- All furniture must have proper floor protectors – Casters must be clean and operate properly (flat, minimum 1" width casters for hospital beds).
- Mannington Resilient floors are not recommended for exterior use or where spiked golf or track shoes are present.
- Mannington Resilient floors are generally not suitable as wall covering or wall surfacing.
- Mannington Resilient flooring is generally not recommended for applications such as hyperbaric rooms, computer rooms, electronic manufacturing or test labs where control of static is critical.

**The Following Codes Explain Why Specific Flooring Types Receive an NR Recommendation**

1. Aseptic Area – Hygienic conditions are extremely important
2. Water Resistance – Wet area installation is necessitated (flash coving, sealed seams), use appropriate product/adhesive system
3. Slip Retardance – A good traction, secure surface is required
4. Static Control – High level of static control normally called for in this area (static dissipative or conductive)

**Annotated Notes**

- a. Only use in operating rooms not requiring conductive or static dissipative flooring.
- b. No standing water
- c. For areas where there can be significant exposure to trafficked dirt and debris. The application of a high quality floor finish or field applied urethane may be required, based on traffic and maintenance practices.
- d. Amtico RP-18, XpressStep for LVT & Sheet Vinyl or XpressStep Premium for LVT must be used under hospital beds and in areas of heavy rolling loads. Use Amtico RP-18 for areas where higher risk of topical moisture is a concern.
- e. Non staining entryway walk-off systems.
