

MANNINGTON COMMERCIAL.

Sub-Floor Conditions and Levelness

As noted in our installation instructions Mannington Commercial's recommends floors to be clean, dry, and free of any contaminate such as paint oils, etc. Surfaces must be smooth and level with all holes and cracks filled with latex based portland cement patch.

Mannington also recommends that the sub-floor levelness meet the American Concrete Institute (P 248-848-3700) and American Plywood Association (P 253-565-6600) specification. They state that the sub-floor levelness do not exceed ¼ inch in 10 foot and Mannington complies with this tolerance.

Should you have any further questions, please contact our Technical Services Department at 800-241-2262, extension 3.
